Customer No. 27752

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An adherent sheet material comprising at least one adhesive, non-raised region protected from inadvertent adherence to a contact surface, said sheet material comprising:
a film having a front face and back face, said front face having a plurality of collapsible, non-adhesive protrusions extending outwardly from said front face and said adhesive, non-raised region disposed between said protrusions, said protrusions having a number density from about 10 protrusions per square inch of said film to about 175 protrusions per square inch of film; and
a permeable substrate layer bonded to said back face of said film with a laminating adhesive, said laminating adhesive having air vent channels.
2. (Original) A sheet material according to claim 1, further comprising a contact adhesive disposed upon said non-raised regions.
3. (Original) A sheet material according to claim 1, wherein a compressive force of at least about 0.1 psi is required to collapse said protrusions.
4. (Original) A sheet material according to claim 3, wherein a compressive force from about 0.5 pounds per square inch to about 15 pounds per square inch is required to collapse said protrusions.
5. (Canceled)
6. (Previously Presented) A sheet material according to claim 1, wherein said density of protrusions is from about 50 protrusions per square inch of said film to about 150 protrusions per square inch of film.

Appl. No. 09/532,576
Atty. Docket No. 7995
Amdt. Dated June 21, 2004
Reply to Final Office Action of June 3, 2004
Customer No. 27752

7. (Original) A sheet material according to claim 6, wherein said density of protrusions is from about 60 protrusions per square inch of said film to about 90 protrusions per square inch of film.

8. (Original) A sheet material according to claim 1, wherein said protrusions having a height from about 0.01 inches to about 0.04 inches.

9. (Original) A sheet material according to claim 8, wherein each said protrusion having a protrusion base surface area from about 0.0007 inches to about 0.008 square inches.

10. (Original) A sheet material according to claim 9, wherein said protrusions having a center-to-center distance from about 0.05 inches to about 0.15 inches.

11. (Original) A sheet material according to claim 10, wherein said protrusions are dome-shaped and have a base diameter from about 0.03 inches to about 0.1 inches.

12. (Original) A sheet material according to Claim 1, wherein said film is high density polyethylene having a thickness from about 0.0003 inches to about 0.003 inches.

13. (Original) A sheet material according to claim 1, wherein said substrate layer is a member selected from the group consisting of flexible foil, fabric, plastic film and paper.

14. (Previously Presented) A sheet material according to claim 20, wherein said air venting channels further comprise at least one aperture disposed within a plurality of said protrusions.

15. (Cancelled)

16-17. (Cancelled)

18. (Currently Amended) A sheet material according to claim [[17]] 1, wherein said substrate further comprises air vent channels.

19. (Cancelled)

Appl. No. 09/532,576
Atty. Docket No. 7995
Amdt. Dated June 21, 2004
Reply to Final Office Action of June 3, 2004
Customer No. 27752

20. (Previously Presented) A sheet material according to claim 1, wherein said substrate further comprises air vent channels.

21. (Currently Amended) An adherent sheet material comprising at least one adhesive, non-raised region protected from inadvertent adherence to a contact surface, said sheet material further comprising:

a permeable film having a front face and back face, said front face having a plurality of collapsible, non-adhesive protrusions extending outwardly from said front face and said adhesive, non-raised region disposed between said protrusions, said film having a number density of protrusions from about 10 protrusions per square inch of said film to about 175 protrusions per square inch of said film; [[and]]

a substrate layer bonded to said back face with a laminating adhesive; and,

wherein said adhesive non-raised region having a peel force of at least about 0.3 pounds per linear inch, and wherein said substrate under said protrusions is permeable and contains no laminating adhesive.

22. (Cancelled)

23. (Currently Amended) A sheet material according to claim [[22]] 21, wherein said substrate layer is a member selected from the group consisting of flexible foil, fabric, plastic film and paper.

24. (Currently Amended) A sheet material according to claim [[22]] 21, wherein a compressive force of at least about 0.1 psi is required to collapse said protrusions.

25. (Original) A sheet material according to claim 24, wherein a compressive force from about 0.5 pounds per square inch to about 15 pounds per square inch is required to collapse said protrusions.

26. (Currently Amended) A sheet material according to claim [[22]] 21, wherein said number density of protrusion is from about 50 protrusions per square inch of said film to about 150 protrusions per square inch of said film.

27. (Original) A sheet material according to claim 26, said number density of protrusion is from about 60 protrusions per square inch of said film to about 90 protrusions per square inch of said film.
28. (Currently Amended) A sheet material according to claim [[22]] 21, wherein said protrusions having a height from about 0.01 inches to about 0.04 inches.
29. (Previously Presented) A sheet material according to claim 28, wherein each said protrusion having a protrusion base surface area from about 0.0007 square inches to about 0.008 square inches.
30. (Original) A sheet material according to claim 29, wherein said protrusions having a center-to-center distance from about 0.05 inches to about 0.15 inches.
31. (Original) A sheet material according to claim 30, wherein said protrusions are dome-shaped and have a base diameter from about 0.03 inches to about 0.1 inches.
32. (Currently Amended) A sheet material according to Claim [[22]] 21, wherein said film is high density polyethylene having a thickness from about 0.0003 inches to about 0.003 inches.
33. (Currently Amended) A sheet material according to claim [[22]] 21, wherein said film having air venting channels.
34. (Original) A sheet material according to claim 33, wherein said air vent channel is at least one aperture disposed within a plurality of said protrusions.
35. (Cancelled)
36. (Currently Amended) A sheet material according to claim [[35]] 21, wherein said laminating adhesive having air vent channels.
37. (Original) A sheet material according to claim 36, wherein said substrate having air vent channels.

38. (Cancelled)

39. (Currently Amended) A sheet material according to claim [[22]] 21, wherein said substrate having air vent channels.

40. (Currently Amended) An adherent sheet material comprising a contact adhesive protected from inadvertent adherence to a contact surface, said sheet material comprising:

a film having a front face and back face, said front face having a plurality of collapsible protrusions extending outwardly from said front face and non-raised regions disposed between said protrusions;

a porous substrate layer bonded to said back face with a laminating adhesive, said laminating adhesive having air vent channels; and,

said adhesive disposed upon said non-raised regions, said film having a number density of protrusions from about 50 protrusions per square inch of said film to about 150 protrusions per square inch of said film.

41. (Cancelled)

42. (Previously Presented) A sheet material according to Claim 40, wherein said substrate layer is a member selected from the group consisting of flexible foil, fabric, plastic film and paper.

43. (Previously Presented) A sheet material according to claim 40, wherein a compressive force of at least about 0.1 psi is required to collapse said protrusions.

44. (Original) A sheet material according to claim 43, wherein a compressive force from about 0.5 pounds per square inch to about 15 pounds per square inch is required to collapse said protrusions.

45. (Previously Presented) A sheet material according to claim 40, said number density of protrusion is from about 60 protrusions per square inch of said film to about 90 protrusions per square inch of said film.

46. (Previously Presented) A sheet material according to claim 40, wherein said protrusions having a height from about 0.01 inches to about 0.04 inches.

Customer No. 27752

47. (Original) A sheet material according to claim 46, wherein each said protrusion having a protrusion base surface area from about 0.0007 inches to about 0.008 square inches.

48. (Original) A sheet material according to claim 47, wherein said protrusions having a center-to-center distance from about 0.05 inches to about 0.15 inches.

49. (Original) A sheet material according to claim 48, wherein said protrusions are dome-shaped and have a base diameter from about 0.03 inches to about 0.1 inches.

50. (Previously Presented) A sheet material according to Claim 40, wherein said film is high density polyethylene having a thickness from about 0.0003 inches to about 0.003 inches.

51. (Previously Presented) A sheet material according to claim 40, wherein said film having air vent channels.

52. (Original) A sheet material according to claim 51, wherein said air venting channel is at least one aperture disposed within a plurality of said protrusions.

53-54. (Cancelled)

55. (Currently Amended) A sheet material according to claim [[54]] 40, wherein said substrate having air vent channels.

56. (Currently Amended) A sheet material according to claim [[53]] 40, wherein said substrate under said protrusions is permeable and contains no laminating adhesive.

57. (Previously Presented) A sheet material according to claim 40, wherein said substrate having air vent channels.

58. (Withdrawn) A method for making an adherent sheet material having a film with protrusions, a contact adhesive protected from inadvertent adherence and a substrate bonded to said film, said sheet being adherable to a target surface only when pressed thereagainst, said method comprising the steps of:

Customer No. 27752

- a) coating a forming drum with a contact adhesive, said forming drum having a top surface, said top surface having a plurality of recesses therein, said coating step applying said contact adhesive to said top surface without bridging said recesses;
- b) placing a piece of flexible film in contact with said contact adhesive on said top surface of said forming drum, said contact adhesive preferentially adhering to said piece of flexible film;
- c) forming said piece of flexible film to create a plurality of protrusions extending into said recesses of said forming drum, said plurality of protrusions being registered with said contact adhesive;
- d) coating said substrate with a laminating adhesive.

Customer No. 27752

- a) coating a forming drum with a contact adhesive, said forming drum having a top surface, said top surface having a plurality of recesses therein, said coating step applying said contact adhesive to said top surface without bridging said recesses;
- b) placing a piece of flexible film in contact with said contact adhesive on said top surface of said forming drum, said contact adhesive preferentially adhering to said piece of flexible film;
- c) forming said piece of flexible film to create a plurality of protrusions extending into said recesses of said forming drum, said plurality of protrusions being registered with said contact adhesive;
- d) coating said substrate with a laminating adhesive;
- e) placing said substrate in contact with a back face of said film, wherein said laminating adhesive coating said substrate contacts said back face of said film;
- f) joining said substrate and said film with pressure to form a bonded layer; and
- e) removing said piece of sheet material together with said pressure sensitive adhesive from said forming drum.

59. (Withdrawn) A method for adhering a sheet material according to claim 1 to a target surface, comprising the steps of:

- (a) positioning said sheet material on said surface with said front face in contact with said surface; and
- (b) applying a pressure perpendicular to said back face of said film sufficient to collapse said collapsible protrusions, whereby said contact adhesive comes in contact with said surface.

60. (Withdrawn) A method according to claim 59, wherein said surface is a vertical surface.

61. (Withdrawn) A method according to claim 60, wherein said surface is a wall.

62. (Withdrawn) An article according to claim 1 and instructions for use, comprising

- (a) positioning said sheet material on said surface with said front face in contact with said surface; and
- (c) applying a force perpendicular to and across said substrate sufficient to collapse said collapsible protrusions, whereby said contact adhesive comes in contact with said surface.
